

Lab 02: Accumulation

In this lab you will be accumulating totals using loops.

Exercises

- 1) Ask the user for a positive integer. Print out the sum of all positive integers less than the input.

The sum of all integers less than `<input>` is `<sum>`.

- 2) Ask the user for two positive integers. Print out the sum of all even numbers between those numbers (exclusive). We'll talk about figuring out which is larger.

The sum of all integers between `<input1>` and `<input2>` is `<sum>`.

- 3) Ask the user for a positive integer. You then need to ask them for that many integers and print out the sum.

Example:

```
Enter a positive integer: 3
Enter any integer: 3
Enter any integer: 12
Enter any integer: -2
The sum of those 3 numbers is 13.
```

Hint: Lines 2-4 above are in a loop.
